

# 4. Landscape and Visual Works

1. Victoria Park

Assessing the landscape and visual impacts of the proposed development has been a key area of assessment to date. A set of technical drawings have been completed to illustrate the potential extent of visibility (of the proposed EW61 hub and blade tip) accounting for the terrain (known as a Zone of Theoretical Visibility (ZTV) map). This map does not however account for screening provided by vegetation and buildings and the extent of actual visibility is much lower than shown.

Photomontages have also been completed from 10 locations from which the ZTV map suggested that there was potential visibility. Those in close vicinity of the proposed turbine location (and hence with the highest potential visibility) are located at:

- 1. Victoria Park;
- 2. Kings Garden Bridge; and
- 3. Southport Pier.
- 4. Kew Forest

3. Southport Pier

4. Kew Forest
